

Microsoft Azure Active Directory Module for Windows PowerShell

Version 1.1.166.0 General Availability Release Notes – 08/15/2016

Overview:

This is a release of Azure Active Directory PowerShell V1 (MSOL) for general availability.

Details of Changes:

The following cmdlets have been added:

- Get-MsolCompanyAllowedDataLocation
- Set-MsolCompanyMultiNationalEnabled
- Get-MsolCompanyAllowedDataLocation

Please note that the Settings cmdlets that were published in the preview release of the MSOL module are no longer available in this module. This functionality can now be found in the newer Azure AD PowerShell V2 Preview module, which can be installed from here:

<https://www.powershellgallery.com/packages/AzureADPreview>

More information about how to use the new cmdlets for Settings can be found here:

<https://docs.microsoft.com/en-us/azure/active-directory/active-directory-accessmanagement-groups-settings-cmdlets>

More information about the Azure AD PowerShell V2 module can be found here:

<https://docs.microsoft.com/en-us/powershell/azuread/>

How to report issues: If you encounter something you believe to be an error, please email AADPS@microsoft.com with:

- The steps to reproduce the error
- The log files found here: C:\Users\[youralias]\AppData\Local\Microsoft\Office365\Powershell
